

I support Satallite Radio and the traffic and weather update. This radio medium is available all over the United States no matter where the listener is located. It is far better and clearer than local radio stations. People listening to XM broadcasts have stations that are in English or Spanish which ever they choose. That is not true in all areas of the country where only local broadcasts are available. Each station is specific which eliminates wait time to hear the information you really need to hear. Please reject the NAB petition 04-160.  
Thank You
